

DATA VISUALISATION FOR REPORTING USING MICROSOFT EXCEL DASHBOARD

7 & 8 November 2022 (Monday & Tuesday)
Connexion Conference & Event Centre @ The Vertical,
Bangsar South, Kuala Lumpur

An Excel Dashboard is a very powerful tool, that can be designed fairly easily, to create an impact on the visualisation of data presented. The Dashboard usually fits on one page; displays key trends, comparisons and data graphically or in small tables; employs best practices that enable the report to be updated quickly and easily; and is interactive, allowing the user to filter data and switch views themselves.

Dashboards enable a reader to quickly make sense of the raw number, by presenting them in visually colourful charts and tables. It also gives valuable insights into the key performance indicators (KPIs) of the business.

FACILITATOR

PALANI MURUGAPPAN

Palani a.k.a. The Interpreter (who helps converge data into information), applies the VERIFYT training methodology, i.e. Validate, Encapsulate and Rationalise raw data in Identifying Information for Future Yield. He is a HRD Corp certified trainer who shares his knowledge and experience culled from over 20 years of involvement in the software application training industry.

If you want to make sense of the data surrounding you; how your organisation's data can help you expand or cut down areas of expenses; or simply move up the corporate ladder by being ahead in terms of interpreting raw data, the Interpreter will be able to assist by mapping the data into a spreadsheet format like Microsoft Excel and performing various business process analysis.

Excel is the most common spreadsheet used in an office environment. While most are familiar with Excel, only a handful know the art of extracting data from a database; or converging raw data into information using Excel's built-in tools. This is where the Interpreter excels in showing the many ways of doing this.
